

BIG LEAK

```
LEAK

I'm on burner device + VPN + RDP + Tails + TOR + SOCKS PROXY. Do not try to find me.

This happened very recently. My girlfriend was expelled from the University for reporting this to the Academic Ethics Committee and Federal oversight agencies. She was a researcher at one of these three schools in their genetics/biotech division:

UC Berkeley (University of California, Berkeley)

MIT (Massachusetts Institute of Technology)

Harvard Medical School

They are working on a CRISPR human gene editing project funded by DARPA to modify human embryos at the genetic level involving human embryos without consent --- but not just to "cure disease" like they claimed publicly.

They were enhancing, augmenting, experimenting with traits that could alter what it means to be human. Targeting well-known lethal monogenic diseases like Tay-Sachs, CF, Huntington's disease - cutting defective genes and inserting corrected sequences. (This is the "public justification.")

Behind the scenes they are working on Muscle Growth Enhancement, Height and Skeletal Optimization, Neurological Plasticity Augmentation (intelligence), Emotion Regulation Experiments (this engineers stable "resistant" personalities for ideal soldiers and workers).

First edits would look like humanitarian interventions ("saving kids from deadly diseases"),

What deadly diseases are their primary focus? Cystic Fibrosis, Tay-Sachs, Canavan, Familial Dysautonomia, Gaucher Disease, Niemann-Pick, etcetera. If you're familiar with these diseases, you would know they predominately afflict Ashkenazi Jews. They are quietly launching a private human upgrade program. You think White Europeans are the superior race now? Wait until the Jews are done creating their own race of hyper-intelligent super-humans. We'll be done for. If we don't act now, we'll be done for. We won't be able to compete.
